

Wood Floor Checklist

- Verify the temperature and moisture of the area of the wooden floors.
- Does the flooring have any noticeable staining or color damage? If you have identified damage or safety hazards, call C1 to report.
- Are the furniture pods placed free of stain, scuff marks, or any other damage? If not, notify C1 for cleaners after realigning the furniture.
- Does the flooring have swelling or warping, or any broken pieces within the wooden floors? To avoid floor swelling, level the wood flooring. If found, notify C1 and notify operational staff. If the hazards require further help from the car park team, then report to them immediately.
- Identify if there is a water leak and inspect the basement, if any. Repair or replace the parts if there is any water damage.
- Ensure if electrical power is accessible in each room.
